

DIA - Dialysis

DIA-AP ANATOMY AND PHYSIOLOGY

OUTCOME: The patient will have a basic understanding of where the kidneys are and their overall function.

STANDARDS:

1. Explain that the normal human body has two kidneys located on either side of the spine just slightly below the ribcage. Each kidney weighs about a quarter of a pound and is the size of a fist. The shape is similar to that of a kidney bean.
2. Discuss that the kidneys help the body maintain fluid levels and assist in regulating blood pressure. In addition, a variety of other chemicals are produced and released by the kidneys so that a balance is always maintained.
3. Review the four major functions of the kidneys, elimination of waste products through an internal blood filtering system, regulation of blood formation and red blood cell production, regulation of blood pressure, and control of the body's chemical and fluid balance.

DIA-C COMPLICATIONS

OUTCOME: The patient/family will understand the complications associated with dialysis and with the decision not to have dialysis.

STANDARDS:

1. Explain that infections are common in dialysis patients and that the patient/family should report all elevations in body temperature to the dialysis staff. Infection, particularly at the site may require immediate hospitalization for IV antibiotic therapy.
2. Explain that deviations from prescribed dietary and fluid restrictions may result in acute metabolic problems, which must be addressed by the dialysis unit.
3. Explain that even with proper dialysis, patients may experience fluid imbalances and that all shortness of breath, unusual swelling, dizziness, etc. should prompt immediate medical evaluation.

DIA-CM CASE MANAGEMENT

OUTCOME: The patient/family/caregiver will understand the importance of integrated case management in achieving optimal physical and behavioral health.

STANDARDS:

1. Discuss roles and responsibilities of each member of the care team including the patient, family/caregiver, and providers in the case management plan.
2. Explain the coordination and integration of resources and services in developing and implementing the case management plan.
3. Explain the need to obtain the appropriate releases of information necessary to support integrated case management and to maintain patient privacy and confidentiality. **Refer to AF-CON.**

DIA-DP DISEASE PROCESS

OUTCOME: The patient/family will understand the causes associated with the patient's end stage renal disease.

STANDARDS:

1. Explain that End Stage Renal Disease usually results from long term or prolonged medical conditions such as hypertension or diabetes.
2. Chronic kidney failure may also be the result of heredity such as polycystic disease.
3. At present there is no known cure for chronic kidney disease, however dialysis or transplantation are treatment options.

DIA-EQ EQUIPMENT

OUTCOME: The patient/family/caregiver will understand the purpose, use, and care associated with the patient's prescribed dialysis regimen.

STANDARDS:

1. Discuss the indications for and benefits of prescribed medical equipment.
2. Discuss and/or demonstrate proper use and care of medical equipment; participate in return demonstration by patient/family/caregiver as appropriate.
3. Discuss signs of equipment malfunction and proper action in case of malfunction.
4. Emphasize the safe use of equipment, including infection control measures. Explain that equipment tubing is designed for a single use.
5. Discuss proper disposal of associated medical supplies.

DIA-FU FOLLOW-UP

OUTCOME: The patient/family/caregiver will understand the importance of fully participating in the treatment regimen and appropriate follow-up and coordination with all healthcare providers.

STANDARDS:

1. Discuss the individual's responsibility in the management of end stage renal disease including the responsibility to keep all healthcare providers informed of changes to the treatment plan.
2. Review the treatment plan with the patient/family/caregiver, emphasizing the importance of follow-up care.
3. Discuss the procedure for obtaining follow-up appointments and the procedure for obtaining emergent care appointments.

DIA-L PATIENT INFORMATION LITERATURE

OUTCOME: The patient/family/caregiver will receive literature regarding the specific type of dialysis the patient is currently receiving, e.g., hemodialysis or peritoneal dialysis.

STANDARDS:

1. Provide the patient/family/caregiver with literature on specific mode of dialysis.
2. Discuss the content of the literature.

DIA-M MEDICATION

OUTCOME: The patient/family/caregiver will understand the medications used in the management of the patient's end stage renal disease.

STANDARDS:

1. Explain the medications to be used by this patient including the dosage, timing, proper use and storage of the medication, important and common side effects of the medication including drug/drug and drug/food interactions.
2. Discuss with patient/family/caregiver the need to review all over the counter medications and herbal products prior to use with the dialysis unit pharmacy staff.
3. Discuss medications which may be used during dialysis and the common or important complications which may result.
4. Explain that the patient's medications may change after starting dialysis. Emphasize the importance of bringing all medications to medical appointments.

DIA-MNT MEDICAL NUTRITION THERAPY

OUTCOME: The patient and family will have an understanding of the specific nutritional intervention(s) needed for treatment or management of this condition, illness, or injury.

STANDARDS:

1. Explain that Medical Nutrition Therapy (MNT) is a systematic nutrition care process provided by a Registered Dietitian (RD) that consists of the following:

- a. Assessment of the nutrition related condition.
 - b. Identification of the patient's nutritional problem.
 - c. Identification of a specific nutrition intervention therapy plan.
 - d. Evaluation of the patient's nutritional care outcomes.
 - e. Reassessment as needed.
2. Review the basic nutrition recommendations for the treatment plan.
 3. Discuss the benefits of nutrition and exercise to health and well-being.
 4. Assist the patient/family in developing an appropriate nutrition care plan.
 5. Refer to other providers or community resources as needed.

DIA-N NUTRITION

OUTCOME: The patient/family will understand the specific prescribed dietary regimen as it relates to their ongoing dialysis.

STANDARDS:

1. Each diet is individualized, however typical dietary restrictions may include calories, fluids, protein, sodium, potassium, calcium, and phosphorus.
2. Refer to a Registered Dietician as appropriate.

DIA-PRO PROCEDURES

OUTCOME: The patient/family will understand the proposed procedure(s), as well as the risks, benefits, alternatives to the proposed procedure(s) and associated factors affecting the patient.

STANDARDS:

1. Explain the specific procedure(s) to be performed, including the risks and benefits of performing the procedure and the adverse events which might result from refusal of the procedure.
2. Discuss alternatives to the proposed procedure(s), including expectant management, as appropriate.
3. Discuss the expected patient/family involvement in the care required following the proposed procedure(s).

DIA-TE TESTS

OUTCOME: The patient/family will understand the test(s) to be performed, including indications and impact on further care.

STANDARDS:

1. Explain the test ordered.
2. Explain the necessity, benefits and risks of the test to be performed, as appropriate, including possible complications that may result from not having the test performed.
3. Explain how the test relates to the course of treatment.
4. Explain any necessary preparation for the test.
5. Explain the meaning of the test results, as appropriate.
